

## TEMPERATURE TESTING STATIONS

### DESCRIPTION OF PRODUCT:

Testing a person for a high fever when entering work, or other establishments, is (*for now*) a common practice. These temperature testing stations are another way to **keep your customers and employees safe** by putting a barrier between them. The stations can help **fight against the transfer of microorganisms, particulates and fluids** to minimize the potential for personnel contamination. They will **help prevent the hands, skin, clothing, eyes, nose, and mouth from coming in contact** with infectious agents. **Contact us with any questions or for a large order quantity discount!**

### SPECIFICATIONS:
